Country of Birth * China

City * Wuhan

Citizenship

Country of Citizenship *	China	**Please enter SSN below**	
Citizenship *	Non-US Citizen	**Please enter ITIN below**	
		Current Visa Status *	None
		Will you be bringing dependents with you? *	No

Programs Selected

AppTerm *	Fall 2017-2018	**Programs Selected**	Computer Sciences MS

Supplemental Applications

Computer Sciences MS

* **We offer financial support to a majority of admitted applicants. If we cannot offer you financial support, however, would you still be interested in admission?**
(Note: Your answer will not affect your chances of receiving support.)

- No
- Yes

* **Please indicate your primary and secondary areas of interest for research below.**
No commitment to these areas is implied and admission is not based on your answers here.

Primary:
Programming Languages and Compilers

* *Secondary:*
Performance Modeling and Analysis

* **List up to 3 faculty you are interested in working with**
(Chice #1)
Barton Miller

(Choice #2)
Somesh Jha

(Choice #3)
Miron Livny

Upload other materials to be considered with your application (optional).
(e.g. thesis, project, or research paper).

Alternatively, you can supply URLs for additional materials. Enter one URL per line. *Please note that these links should be available and active through next March.*

Funding

Program Participation

Did you participate in the Ronald E. McNair Postbaccalaureate Achievement Program?	
Did you participate in the SROP (Summer Research Opportunity Program)?	
Did you participate in a TRIO program?	
Did you participate in the Wisconsin Alliance for Minority Participation (WiscAMP)?	
Did you participate in the Institute for the Recruitment of Teachers (IRT) program?	
Did you participate in the FASTrack or BANNER financial support programs?	
Did you participate in the UW-Madison PEOPLE Program?	

Financial

Did you receive a Pell Grant through your undergraduate institution?	
Did your family receive or does your family currently receive SSI Disability Benefits?	
Are you a Gates Millennium Scholar?	
Did you receive free or reduced school lunch?	

Signature & Submit

Additional Information

Did either of your parents or legal guardians attend a higher education institution?	Yes
Indicate the highest degree earned	Bachelors
Do you have a documented disability?	No
Including yourself, how many family members live within your household?	4
How many of those family members are under 26 years of age?	1
How many of those family members are under 18 years of age?	1

EXPERIENCE

Ruijin Hospital, Shanghai Jiao Tong University School of Medicine Aug. 2016 – Oct. 2016
System Developer, **involved in the back-end development of their Intelligence Medical Diagnosis System**
- Implemented in Ruby a module that gives the recommended treatment method according to patients' medical records.
- Designed a disjunctive normal form standard rule format and encoded rules into .json files based on *NCCN* guidelines.
- Optimized the data format to let doctors without any programming skills make rule updates and amendments easily.

Intelligent Internet of Things Research Center, SJTU Feb. 2016 – Present
Supervised by Prof. Xinbing Wang, **co-authored two papers on graph theory; back-end development of Acemap**
- Conducted experiment on large-scale datasets including citation network, P2P network and Twitter Ego network.
- Designed a Markov Decision Process (MDP) based exact algorithm for calculating the optimal testing strategy.
- After submitted the two papers above, I am now developing the search engine of our lab's academic site Acemap.

Lab for Collaborative Computing and Intelligence Technology, SJTU Jul. 2015 – Dec. 2015
Supervised by Prof. Jian Cao, **co-authored a paper on natural language processing and text mining**
- Involved in the idea formation of using discourse parsing in service package recommendation for mashup creation.
- Implemented discourse segmenting and parsing modules. Built syntactic tree based service relationship network.
- Built a recommendation system with a three-layer architecture providing supportive data for our theoretical study.

Experienced Group Leader in Course Projects
- Acted as group leader in projects of courses including Software Engineering, Machine Learning, Computer Network and many other CS related courses. Skilled in programming, managing group work and giving presentations.
- Representative work:
  - A 3D Chinese chess game based on pygame and OpenGL;
  - An Integrated Development Environment(IDE) designed for Online Judge users;
  - A search engine website supporting both text search and image search;
  - An multi-functional Network Attached Storage(NAS) system based on Raspberry Pi.

CERTIFICATES AND AWARDS

- China Computer Federation Certified Software Professional **(Top 1.5%)** Apr. 2016
- Xindong First Level Enterprise Scholarship **(Top 5%)** Apr. 2016
- China Undergraduate Mathematical Contest in Modeling, **National First Prize** Dec. 2015
- Academic Excellence Scholarship of SJTU **(Top 10%)** 2015 & 2016

SKILLS

- Programming: C/C++, C#, Python, Ruby, PHP, SQL, etc.
- Languages: Mandarin(native), English(GRE:323+3.5/TOEFL:100), Japanese(JLPT N1 (Highest Level):123/180)
- Others: Linux, Vim, LaTeX

[1] Class website: http://english.seiee.sjtu.edu.cn/english/info/8338.htm. IEEE Honor Class, also known as IEEE Pilot Class, is an elite-education program of SJTU.

Statement of Purpose

Undergraduate study in Shanghai Jiao Tong University has provided me a rich and varied experience in computer science. After all these experience, I found that my special interest, which is something basic and common but extremely important, is in how to write elegant code and design perfect programs. This is exactly why I am here applying to your Master's program and stressing my study emphasis on Programming Languages and Systems Research.

Learning in IEEE Honor Class, an elite-education program in SJTU, has been a mingled experience of high demanding courses and more research opportunities. The "learning by doing" educational philosophy our class advocates made me realize that Computer Science was such an interesting realm that your imagination would never be imprisoned by a standard answer. Therefore, in course projects I have always acted as a team leader and tried to conduct programs aiming to solve practical problems. From a multi-language IDE for Online Judge website users, to a dormitory-oriented network attached storage system on Raspberry Pi, my works have never lacked functionality and applicability. However, reviewing these projects had always given me more to introspect than to celebrate, as when it came to the utility of language features, software architecture and interface design, there were often subtle gaps between my programs and professional ones. It was by practice that I found a program is actually more than algorithm and data structure. The curiosity of what is lying above had become the source of my demand for a further study.

During my sophomore and junior year, I participated in several research topics and co-authored in three papers. The role I played in academic research had been more practical than theoretical. My first research topic, supervised by Prof Jian Cao, was on discourse paring usage in service package recommender systems. I independently designed and implemented a service recommendation engine with a three-layer architecture, which had provided rich and stable supportive data for our theoretical part of study, and our result has been published on 2016 IEEE International Conference on Web Services. My other two researches were conducted in the theoretical group of Prof. Xinbing Wang. There I assisted in some pure theoretical studies and mainly concentrated on algorithm details and experimental programs. My main work was on the study of source-destination connection in uncertain graphs. There I conducted an elaborated experiment on large-scale real life datasets including citation network, P2P network and Twitter Ego network, and designed a Markov Decision Process (MDP) based exact algorithm for calculating the optimal testing strategy. My part of work has been highly evaluated by paper reviewers and our paper is accepted by IEEE INFOCOM 2017. Programming for research is zero tolerant to bugs and errors, so it needs you to be very technical and professional in your implementation. After the training of these experiences, I got quite familiar with many programming languages and their scientific computing libraries. Also, I formed the ability to study relevant

researches and published papers for inspirations to solve new derived problems. Long engagement with algorithm and code had also inspired me to think how we can utilize or even optimize our programming language to help us find latent bugs or achieve a higher performance, and how we can build our system to be more efficient, robust and reliable.

To further build my professional skills, this summer I conducted an internship collaborated with Ruijin Hospital. Involved in the development of their Intelligence Medical Diagnosis System, I implemented a rule engine that gives evidence-based treatment methods for breast cancer patients. The final version of my module was after many times of code review and refactoring. The engine part was containing a recursive decision tree loader and a rule parser, implemented within 100 lines. And the rule part was in JSON files containing node labels and relatives, with the rule body described in disjunctive normal forms. My module had been light-weighted, and guaranteed an easy modification on the decision tree structures and rules. Now my module is now widely used in the diagnosis system as a bottom-level module. Working with professionals had taught me that as a software developer the value you create is not only from what you implement but also from how you implement, and a profound understanding to the programming language and development environment is indispensable for an elegant implementation.

Learning computer science has been the busiest but most fulfilling period of my life, as I can feel that I am learning what I really like and willing to be fully devoted to it. I enjoyed doing algorithm design and implementation in academic research, and equally enjoyed doing software development in industrial practice. The commonness in both of them is how to implement your idea into solid code, and that is exactly what I want to focus on for my Master's study, to let me build a solid foundation for either an academic or industrial future career. UW-Madison has been my dream school for my graduate's study. I have been deeply impressed by your Paradyn Tools Project and would very like to study how a high-performance software can be achieved not only by the developers but also by aids of developing tools. As for me, a theoretical but more applied computer science is exactly that I want, and it will be my greatest pleasure if I could join your Systems Research Group to conduct my future study. Thank you for your time and consideration.

Sincerely Yours,
Qianyang Peng

说　　明

学年

每学年开始于九月，结束于次年八月。2011年（含）起，每学年包括两个长学期和一个暑期学期，长学期有16周的规定课程，短学期有4周的规定课程；2011年之前，每学年包括两个学期，每学期有18周规定课程。

考核与记分方式

考核根据课程类别分为考试和考查两类，其中考试课程的记分方式为百分制或等级制，考查课程的记分方式为合格/不合格（Pass/Failure）两级制。详细注释如下：

1、从2005届毕业生起，我校成绩记录不再使用五级记分制（优秀、良好、中、及格、不及格），已计入的成绩参照附表进行折算；2004届（含2004届）以前学生成绩仍按原记分方式执行，同时由学校出具的中英文成绩证明中成绩折算方法也不做调整，具体参照附表；

2、考查课程不计入平均积点，但计入总学分，考查课程总学分达不到培养计划要求不能毕业；

3、自03届毕业生起部分课程为双语或英语授课（双语或英语授课课程不另标注），03届以前所有课程除英语、日语等语言类课程外均采用中文授课；02届以前（含02届）毕业生如果英语从二级开始修读，对应英文成绩单英语提高一级；

4、学时、学分与GPA：2011年（含）起，16学时=1学分；2011年之前，18学时=1学分；GPA=Σ（学分×积点）/ Σ学分，教务处不受理GPA公证。

Explanatory Notes

Academic Year

The academic year of the university begins in September and ends in August of the following year From the year of 2011, it includes two long semesters and one summer semester, each long semester has sixteen weeks of scheduled classes,summer semester has four weeks of scheduled classes;Before the year of 2011, it includes two semesters,each semester has eighteen weeks of scheduled classes.

Score-Transformation Rules For Undergraduate Courses of SJTU

1. For students graduated in 2005 or after, some courses are graded by the " Pass/Failure " grading system,and others are graded by the hundred-mark system. The Chinese five-level score system(优秀excellent,良好good,中fair,及格pass,不及格 failure)is no longer in force.The transformation rules are illustrated in the attached chart. For students graduated in 2004 or before, the transformation rules are unchanged.

2. The grade point average does not include the courses graded by the " Pass/Failure " , but the credits of these courses are added to the total credits. For graduation, students need to accumulate the required credits,as specified for each program.

3. For students graduated in 2003 or after, some courses are taught bilingually or in English; for students graduated in 2002 or before, all the courses were taught in Chinese language only, except for language courses such as English courses, Japanese courses, and so on; For students graduated in 2002 or before, the score of English is improved one level if he or she studies English from Band 2

4 From the year of 2011, one credit is designated for one lecture hour per week for 16 weeks; Before the year of 2011, one credit is designated for one lecture hour per week for 18 weeks; GPA =Σ(course credit×point)/Σcourse credit, Academic Affairs Division does not verify students ' GPA.

附表/Attached Chart

新记分制(2005届起)New Grading System(For Students Graduated in year 2005 or After)						旧记分制 Old Grading System(For Students Graduated in year 2004 or Before)

The Chinese five-level score system(优秀 excellent.良好 good.中 fair.及格 pass.不及格 failure)is no longer in force. The transformation rules are illustrated in the attached chart. For students graduated in 2004 or before, the transformation rules are unchanged.

2. The grade point average does not include the courses graded by the "Pass/Failure", but the credits of these courses are added to the total credits. For graduation, students need to accumulate the required credits, as specified for each program.

3. For students graduated in 2003 or after, some courses are taught bilingually or in English; for students graduated in 2002 or before, all the courses were taught in Chinese language only, except for language courses such as English courses, Japanese courses, and so on; For students graduated in 2002 or before, the score of English is improved one level if he or she studies English from Band 2.

4. From the year of 2011, one credit is designated for one lecture hour per week for 16 weeks; Before the year of 2011, one credit is designated for one lecture hour per week for 18 weeks; GPA = Σ (course credit × point)/ Σ course credit , Academic Affairs Division does not verify students' GPA.

附表/Attached Chart

新记分制(2005 届起)New Grading System(For Students Graduated in year 2005 or After)						旧记分制 Old Grading System(For Students Graduated in year 2004 or Before)				
考查考核			考试考核			五（四）级考核			百分考核

IEEE 试点班专业证明
MAJOR CERTIFICATION

兹证明 彭乾旸 同学，学号 5130309751，性别 男，出生日期 1995-05-12，国籍 中国，于 2013-09 进入上海交通大学学习。

该生现就读于电子信息与电气工程学院 IEEE 试点班，主修 计算机科学与技术 方向。

This is to certify that student Peng Qianyang, SJTU ID 5130309751, Male, born on 1995-05-12, China as nationality, entered Shanghai Jiao Tong University in 2013-09 .

Now He studies in IEEE Honor Class, School of Electronic Information and Electrical Engineering. His primary area of study is Computer Science & Technology.
